

Occupational safety and health policy

Introduction

Jean Müller GmbH Elektrotechnische Fabrik is committed to ensuring the health and safety of all employees and to preventing accidents and work-related illnesses. Our SGA policy (safety, health, and working environment) is based on the requirements of ISO 45001 and forms the basis for an effective management system for the continuous improvement of our working conditions.

Goals

Our occupational safety and health policy goals are:

1. Protection of employees

We do everything in our power to protect our employees from hazards in the workplace. This includes identifying, assessing, and minimizing risks, as well as providing suitable personal protective equipment.

2. Legal compliance

JEAN MÜLLER is committed to complying with all relevant legal requirements and regulations in the area of occupational health and safety.

3. Prevention

Through regular risk assessments and training, we promote a preventive safety culture in which all employees can actively contribute to improving working conditions.

4. Continuous improvement

We strive for continuous improvement of our OHS management system. To this end, we regularly evaluate our processes, measures, and their effectiveness.

5. Employee participation

The involvement of our employees is crucial to the success of our OHS policy. We promote open communication on safety and health issues and encourage all employees to contribute suggestions for improvement.

Responsibility

Management is responsible for implementing this SGA policy and ensuring that sufficient resources are provided. All managers are responsible for creating a safe working environment and training their teams in health and safety.

Every employee has the right and duty to report safety hazards and take action to eliminate them when necessary. We expect all employees to actively participate in the implementation of this policy.

Training and awareness raising

JEAN MÜLLER is committed to providing regular training to raise awareness of safety and health issues. These training sessions are designed to impart knowledge about safe working practices and to strengthen each individual's sense of responsibility.

Documentation

All relevant information relating to our EMS management system is documented. This includes risk assessments, training materials, and reports on incidents or near misses.

Conclusion

The safety and health of our employees is our top priority. With this OHS policy, we are committed to a responsible approach to occupational safety and health protection. Together, we are working to create a safe working environment in which every employee can reach their full potential.
