

Energy policy

Introduction

Jean Müller GmbH Elektrotechnische Fabrik is committed to pursuing a sustainable and efficient energy policy that complies with the requirements of ISO 50001. Our goal is to optimize energy consumption in all areas of our company in order to achieve both ecological and economic benefits.

Goals

Our energy goals are:

1. Increasing energy efficiency

We are actively committed to continuously improving the energy efficiency of our processes and facilities. Through regular analyses and optimizations, we identify potential savings and implement appropriate measures.

2. Reducing energy consumption

JEAN MÜLLER strives to systematically reduce its overall energy consumption. This includes introducing energy-efficient technologies and promoting behavioral changes among our employees.

3. Use renewable energies

Wherever possible, we rely on renewable energies to meet our energy needs.

4. Employee engagement and training

Every employee plays a crucial role in implementing our energy policy. We promote awareness of energy-efficient practices through training and information events and encourage all employees to actively contribute to reducing energy consumption.

5. Monitoring and continuous improvement

We are committed to regularly monitoring and evaluating our energy performance. Through internal audits and management reviews, we ensure that our energy management system is functioning effectively and is continuously improved.

Responsibility

Management is responsible for implementing this energy policy and complying with all relevant legal requirements in the area of energy management. All managers are responsible for informing their teams about energy-related issues and promoting a culture of energy conservation within the company. Every employee has the right and the duty to actively contribute to improving our energy efficiency. We encourage all employees to make suggestions for reducing energy consumption and to use resources responsibly.

Documentation and review

We document all relevant information within the framework of our energy management system in accordance with the requirements of ISO 50001. This documentation includes data on energy consumption, measures taken to increase efficiency, and the results of internal audits.

Conclusion

JEAN MÜLLER is committed to the responsible use of energy resources. With this energy policy, we are laying the foundation for a successful energy management system based on increased efficiency, resource conservation, and sustainable action. Together, we are working to minimize our energy consumption and make a positive contribution to climate protection.
